

Course Completion

After conclusion of this course, the students can do all these things:

- ✓ Automatic managerial tasks
- ✓ Backup as well as restore the databases
- ✓ Clustering administration/implantation of the SQL Server 2012
- ✓ Data Compression, Central Management Servers, and Resource Governor
- ✓ Implementation and administration always on groups
- ✓ Install as well as configure the SQL Server 2012
- ✓ Manage security
- ✓ Managing indexes as well as finding the performance bottlenecks
- ✓ Maintaining higher availability like log-shipping or mirroring
- ✓ Performance tuning through DTA, Profiler, and System monitor
- ✓ Reproduce data between the SQL Server requests
- ✓ Upgrade from the older versions including 2005, 2008, and R2 to SQL Server 2012
- ✓ User-defined Server roles, Contained Databases, as well as Column stock up indexes

SQL Server DBA Training Syllabus

Advanced Administration

1. Certificates and Signatures
2. Query Troubleshooting
3. SQL Server Profiler
4. DB Engine Tuning Advisor
5. Data Movement Procedures
6. SMO and BCP
7. Maintenance Plans
8. Database Mail
9. Clustering Configuration and Procedures
10. Blockings and Deadlocks
11. Partitioning Techniques
12. DB Snapshots and usage
13. Backup Strategies
14. Restore Techniques
15. Replication Techniques including RMO
16. Securing Replication
17. Log Shipping with Security
18. DB Mirroring and Troubleshooting
19. Security Enforcement Performance Tuning
20. Import and Export using SSIS
21. Cloning Databases and Objects
